

HTML Slide Show

Windows HTML Slide Show is a free and easy to use program takes your photos and instantly creates a web photo gallery. Not only is it great for ~~being~~ entertaining others with your vacation photos, it could also be a terrific tool for students.

What Does an HTML Slide Show Look Like? [CLICK HERE](#) to see a sample.

Downloading the Software

[CLICK HERE](#) to begin installing the software. When prompted, choose **Run**. Accept all default settings.

Preparing Photos for Use in an HTML SlideShow

Before starting to create a slideshow, rotate all photos to a landscape view. Place all the photos you will use in one folder. (This is not required, but it will make it easier to locate the photos.)

Creating an HTML Slide Show

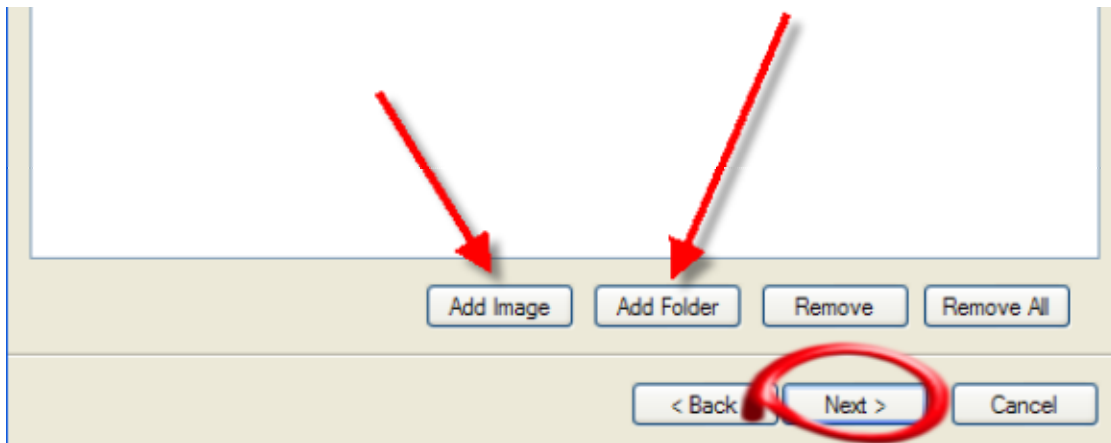

Choose **Start Menu > Programs > Powertoy for Windows XP > Slide Show Wizard**.

Choose **Next**.

If all of your images are in one folder, choose **Add Folder**. If they are in various locations on your computer, or you wish to use only some of the images in a folder, choose **Add Image**.

Adding a Folder

Browse for the folder, and then click OK. All images in the folder will be added to your slideshow.

Adding Images

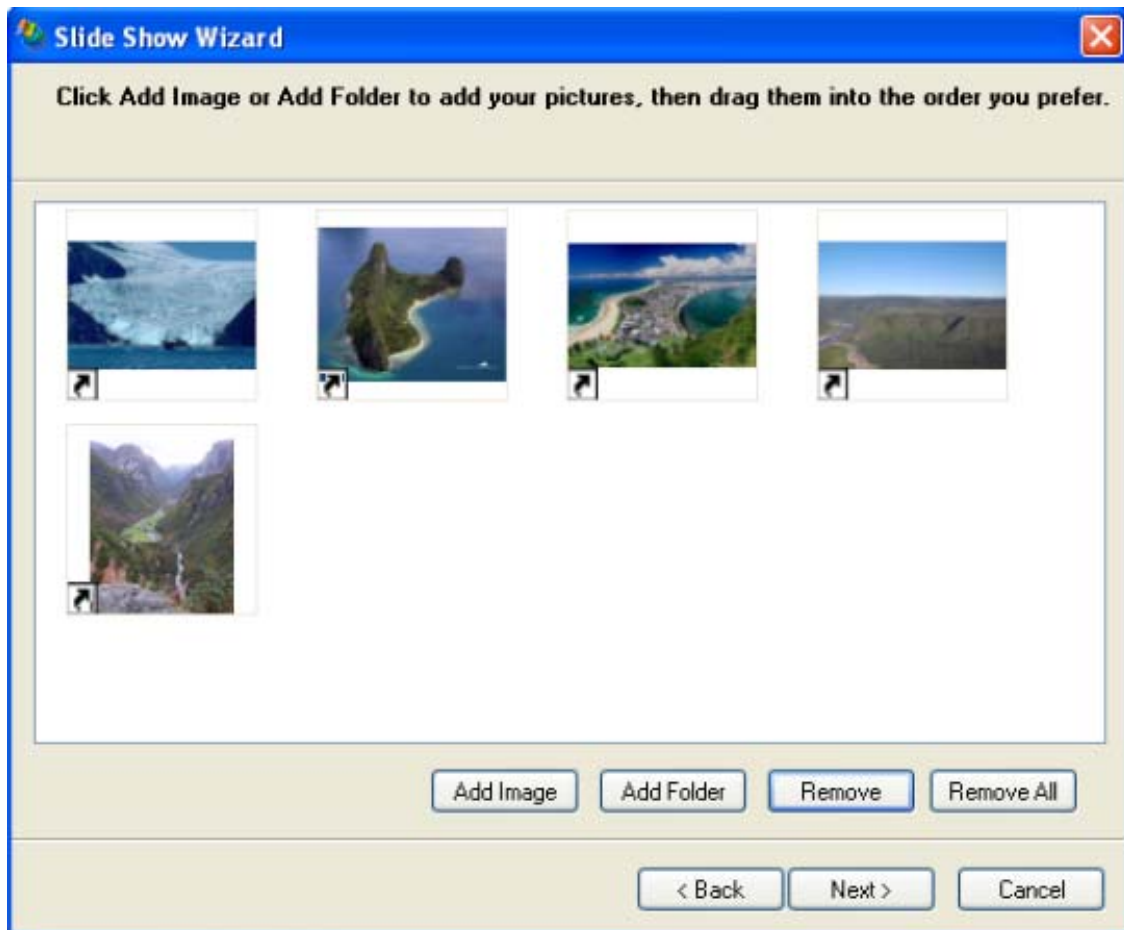

Browse for the folder the contains the images, and then click OK.

If you wish to use only some of the images in a folder, you can select only the photos you wish to include. Hold the **CTRL (Control)** key, and single click all of the photos you want. Then release the **CTRL** key and click **Open**.

If you wish to use images from a variety of folders, repeat the process and select a different folder.

To remove any of the photos, single click the photo to select it, and click the Remove button. To add more photos, click **Add Image** or **Add Folder** and repeat the process.

When you have selected all of the photos that you want to include in your slideshow, click **Next**.

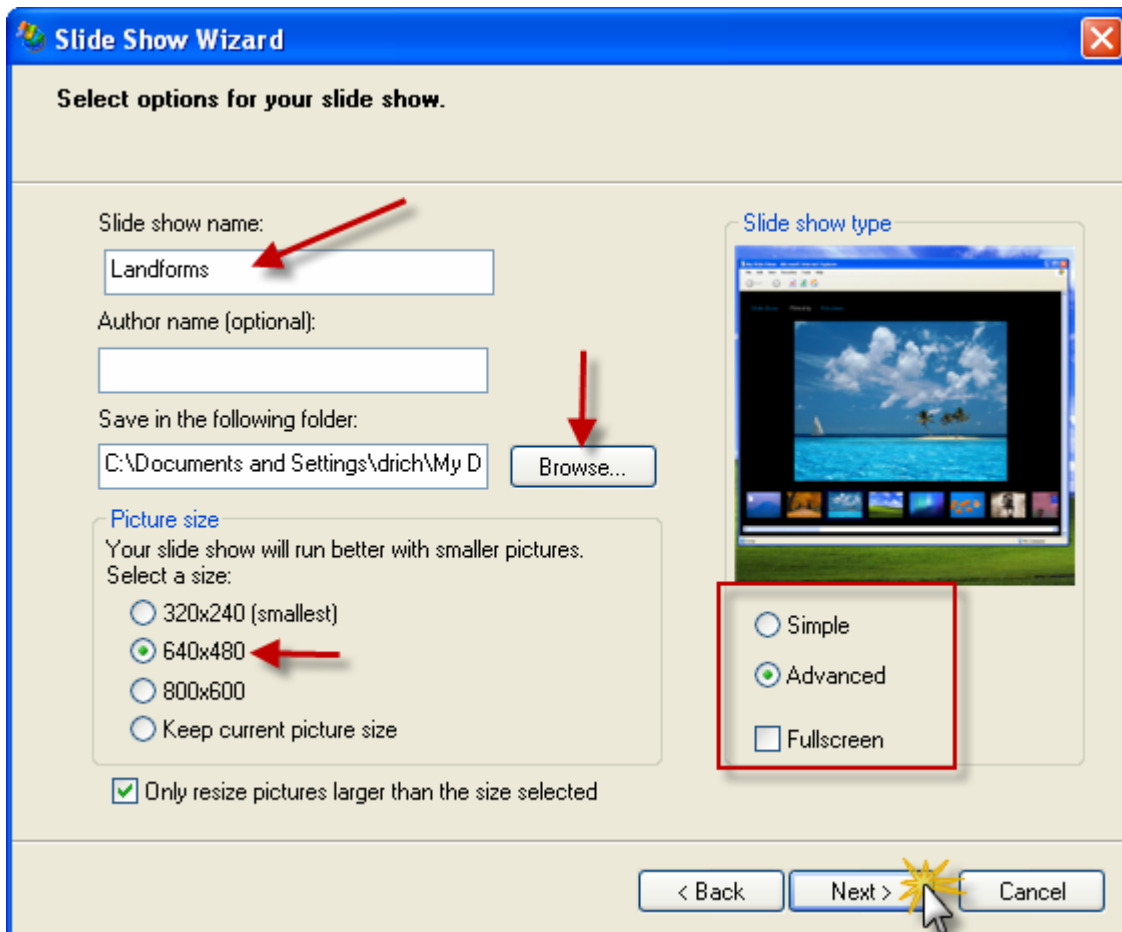

Enter a name for your show. This name will be visible on the web if you post your show.

Browse for a location in which to save your slide show. (If you do not specify a location, the program will create a folder called My Slide Shows in My Documents.)

Choose a picture size. 640X480 will fit comfortably on any screen.

Choose a slide show type. Clicking in the circle will show you a preview above of what the type will look like. (My sample was advanced.)

Click **Next**.

Then click **Finish**. This will close the program.

Viewing Your HTML Slide Show

Browse your computer for the folder in which you chose to save your slide show. Inside that folder you will find another folder with the name you chose for your slide show.

Inside that folder you will find three items:

Opening the file named **Default** will start the slide show. Do not rename, move, or delete the default.htm file or folders, or any of the files within the folders. Doing so will cause the slideshow to malfunction.

If you wish to save your slideshow to a flash drive or burn it to a CD, copy all three items in the folder.
